
Embargoed Areas for IOF Events - Guide

About this Guide

It is meant to be read by IOF Event Organisers and IOF Event Advisors. It uses the functionality of Google maps, IOF Eventor and a word template to make up a process to publish Embargoed areas info for athletes and team officials.

Create a Google map

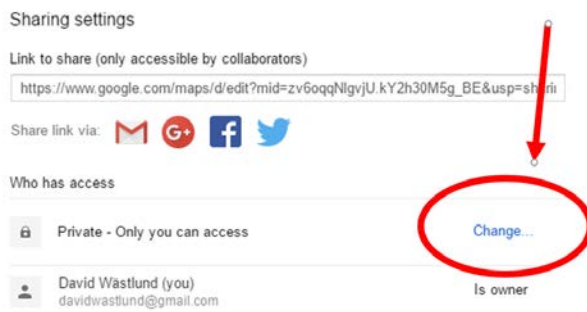

Create a google map and start with the most important, the Embargoed areas.

Help can be found on google help sites on the web. Search for “Google MyMaps” or try this link:

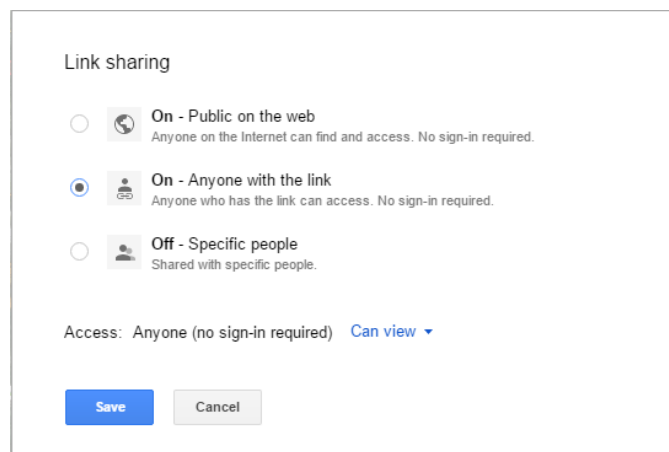

<https://support.google.com/mymaps?#topic=3188329>

When the first version is ready for publishing, create a read-only link:

1. Click on Share
2. Click on “Change”

3. Choose On – Anyone with the link

Fill in the word - template (another document) and make a PDF of it and upload to the Event in IOF Eventor.

Updating the map info

Whenever an update is done, decide if it is of any significance for the fairness of the completion. If it is important you need to update the map as well as inform the orienteering community.

Important change:

1. Update map info
2. Update the IOF Template information and the Change tracking info.
3. Upload the new template to IOF Eventor.
4. Place a note on the IOF Eventor and/or inform on External Event Page

Not important change

1. Update map info

Colour coding of markers and areas

Red:

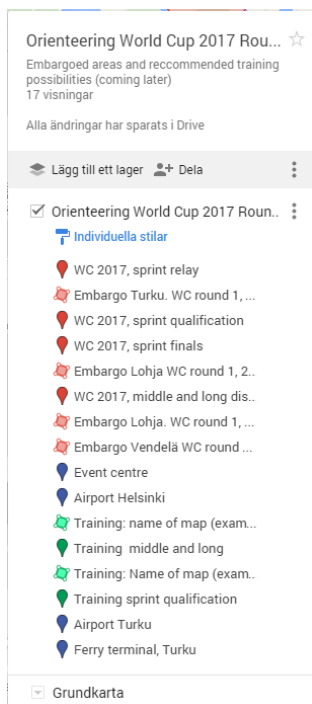

- Embargoed areas
- Embargoed Point of interests

Green:

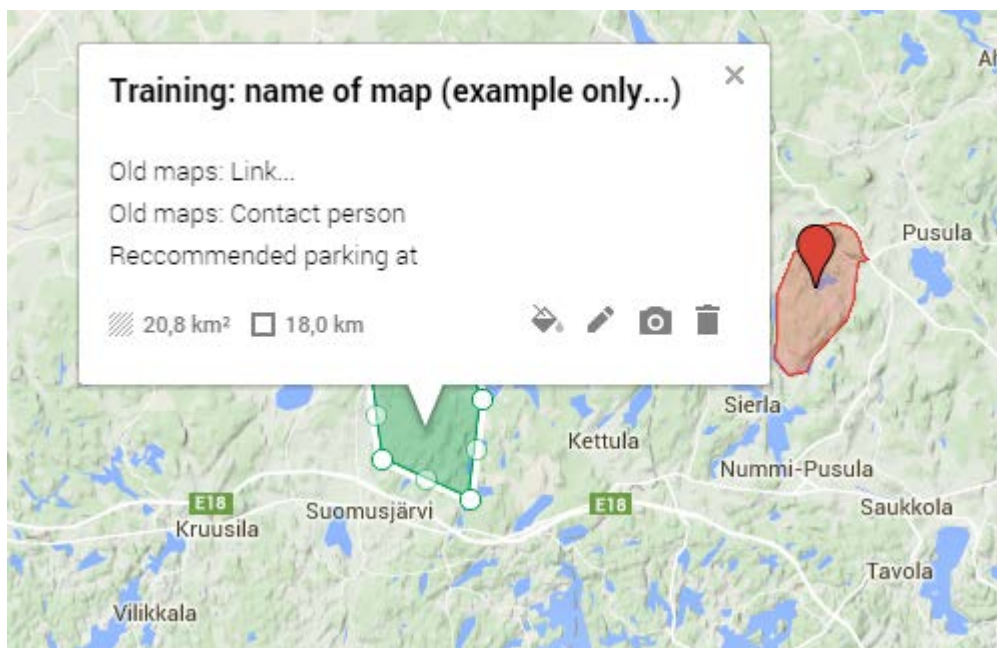

- Allowed routes in Embargoed areas
- Training areas
- Training Points of interest

Blue:

- Other areas or points of interest

Inserting external links to training Maps etc. in the Point OF interest Description

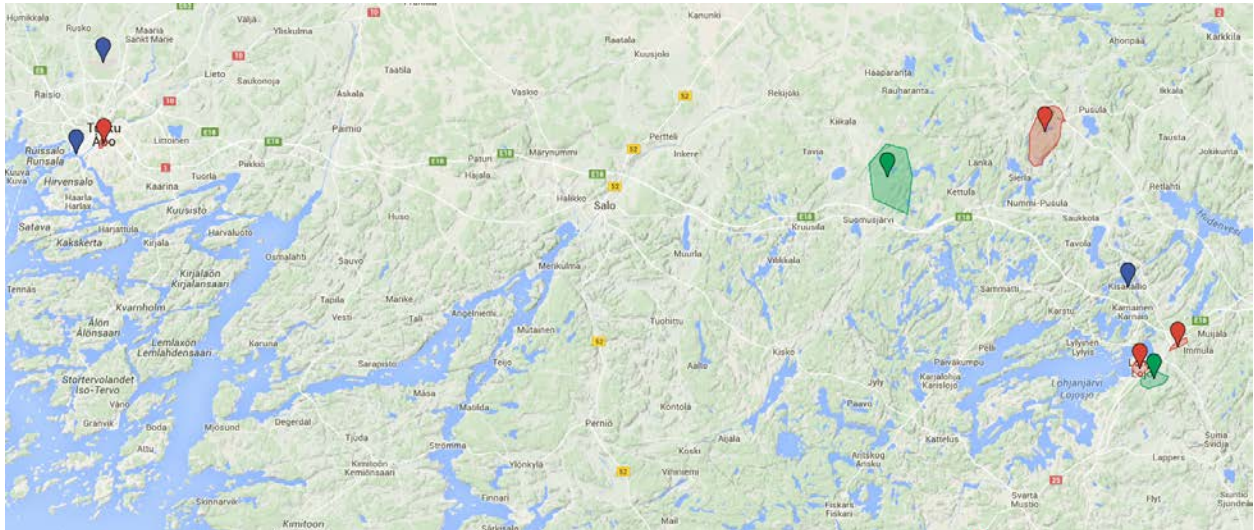

You can insert links in the description field of the Marker (Area or Point of Interest)

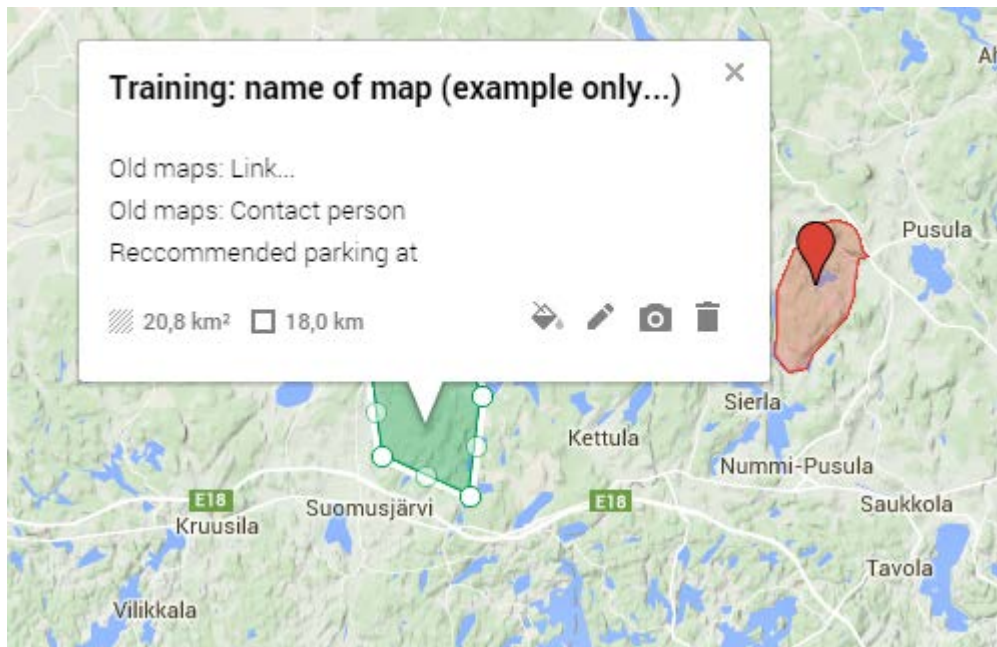

The link must go to a read-only, open document storage like Google Drive; Microsoft OneDrive; iCloud, Dropbox or similar

Example of all Areas and Point of interests

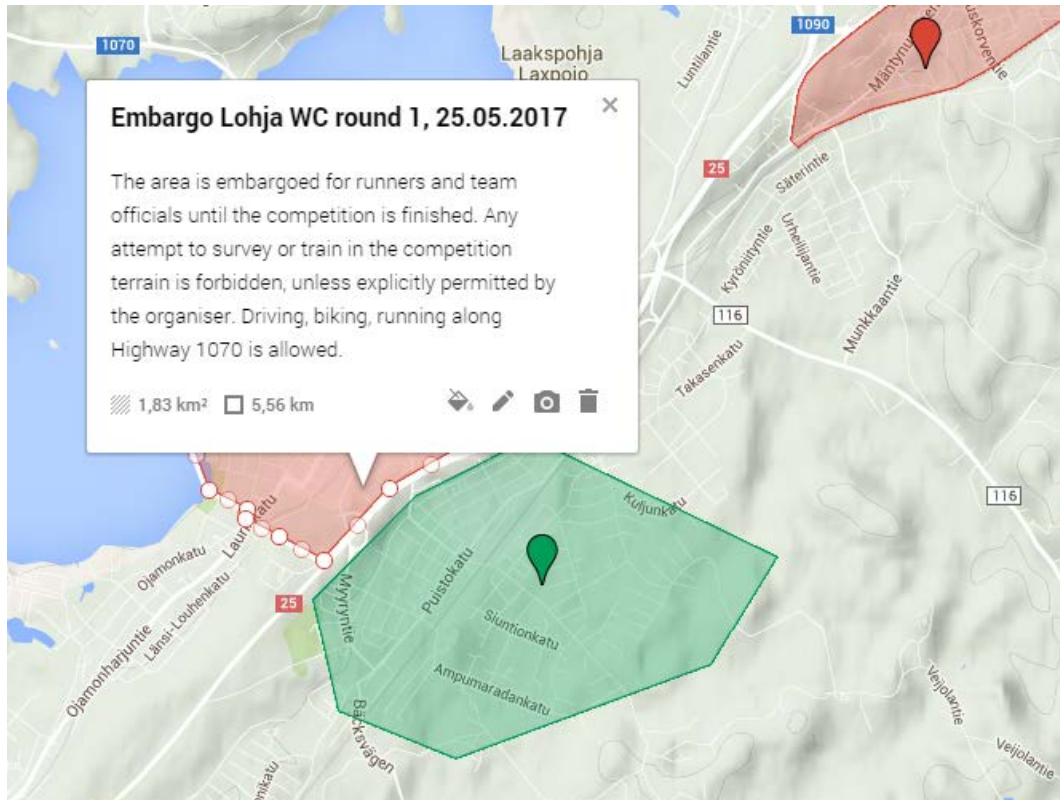

Overview
